Method Selection and Planning

4. Method selection and planning [10 marks]:

a) Give an outline and justification of the team's software engineering methods, and identify any development or collaboration tools that the team has used to support the project or the team working. Justify the fitness of the selected tools with the team's software engineering methods and discuss alternatives considered. (3 marks, ≤ 2 pages).

b) Outline the team's approach to team organisation, and explain why the chosen approach is appropriate for both the team and the project (2 marks, ≤ 1 page).

c) Give a systematic plan for the project. Your plan should lay out the key tasks, their starting and finishing dates, as well as task priorities and dependencies. Provide weekly snapshots of the plan on your team's website and discuss how the plan evolved throughout the duration of the project (5 marks, ≤ 2 pages).

4.7 Methods and plans, and their updating:

• Make sure that you understand what is meant by the words used in the questions: terminology is used in its software engineering sense, not general English usage.

• Only answer the questions asked: you will not get credit for exploring other aspects of your team work in your answers.

• When you are asked to update or replace a report, you will gain credit for doing what is asked – you will lose credit, for instance, if it is unclear what you changed.
